### ENVIRONMENTAL POLICY

We support sustainable development and are committed to environmental protection in all our actions. We actively endeavor to prevent and lessen any detriments our business actions would cause to the environment.

In order to succeed in our work for the environment, we are constantly developing our operations. We evaluate the environmental impacts and risks of our operations and set goals to lessen and prevent these impacts. Fulfillment of these goals is measured and monitored according to the principles of continual improvement.

We want to be a reliable and responsible partner to our customers and associates. We follow the developments of the industry and are committed to fulfill our compliance obligations to follow the environmental laws, regional environmental requirements and regulations and the requirements for environmental protection set by stakeholders. Our environmental system is certified according to ISO 14001 standard and we are committed to developing the system according to the methods of continual improvement to strengthen the environmental responsibility of our company.

Commitment of the company management is required for the objectives for environmental system to be fulfilled. The sufficient training of the personnel and constant communication on matters related to environmental matters is utilized to promote the use of environmentally efficient work and operating principles, to lessen the strain on the environment caused by our operations and to increase awareness of our environmental objectives and of our environmental management system including its importance on all levels of the operations.
